## **DETAILED ACTION**

### ***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 23-42, drawn to a method of making a magnetic read head, classified in class 29, subclass 603.15.
  - II. Claims 43-48, drawn to a method of making a merged magnetic head, classified in class 29, subclass 603.08.
  - III. Claim 50, drawn to a method of making a spin valve sensor, classified in class 29, subclass 603.11.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Group II and I & III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a method of making a merged magnetic head does not require a milling process for milling away spin valve sensor material and forming a non-magnetic spacer layer of the subcombination. The subcombination has separate utility such as a milling process and a non-magnetic spacer layer.

Art Unit: 3729

3. Inventions Group I and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention Group I has separate utility such as a milling process for milling away spin valve sensor material and invention Group III has separate utility such as forming a non-magnetic spacer layer between the oxide layer and the free layer. See MPEP § 806.05(d).

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

5. A telephone call was made to Mr. Johnston on 9/11/2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Paul D Kim whose telephone number is 703-308-8356.
